SS-LG Stainless Steel Linear Grille

Description

SS-LG (Stainless Steel Linear Grille) options are designed for use with the AirFixture line of underfloor linear air terminals. Alternatively, the beautiful stainless finish of these grilles make them ideal for indoor / outdoor aesthetic installations.

SS-LG grilles are available in two (2) design configurations; Framed and Frameless. Both options are composed of stainless steel, either 304 or 316 series (specify on order). Their high strength design is fully tested and rated to accommodate 900–1200 lb./in.² point load, depending on grille dimensions. Linear bars are precision roll-formed; standard width is nominal minimum 0.2" (5.5mm), with 0–15° air flow deflection.

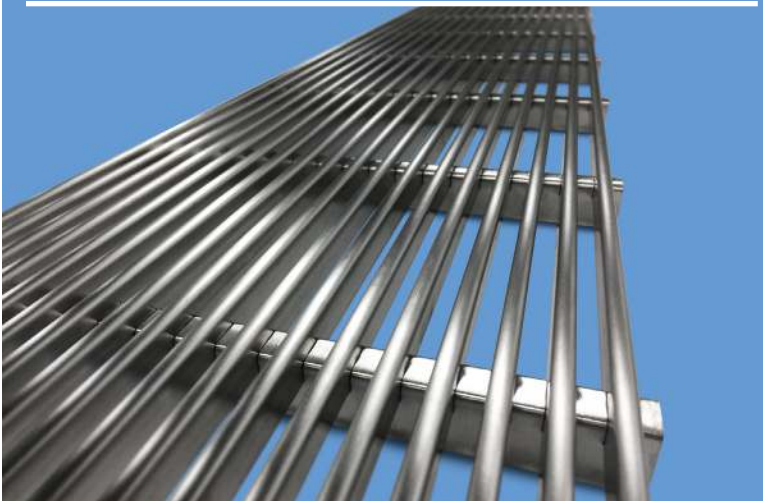

All SS-LG linear grilles are fully manufactured to specification; a variety of dimensions and configurations are available, including variable linear bar width and spacing (specify on order).

This innovative grille design allows for consistent appearance, short lead times and pricing comparable to aluminum alternatives!

Specifications

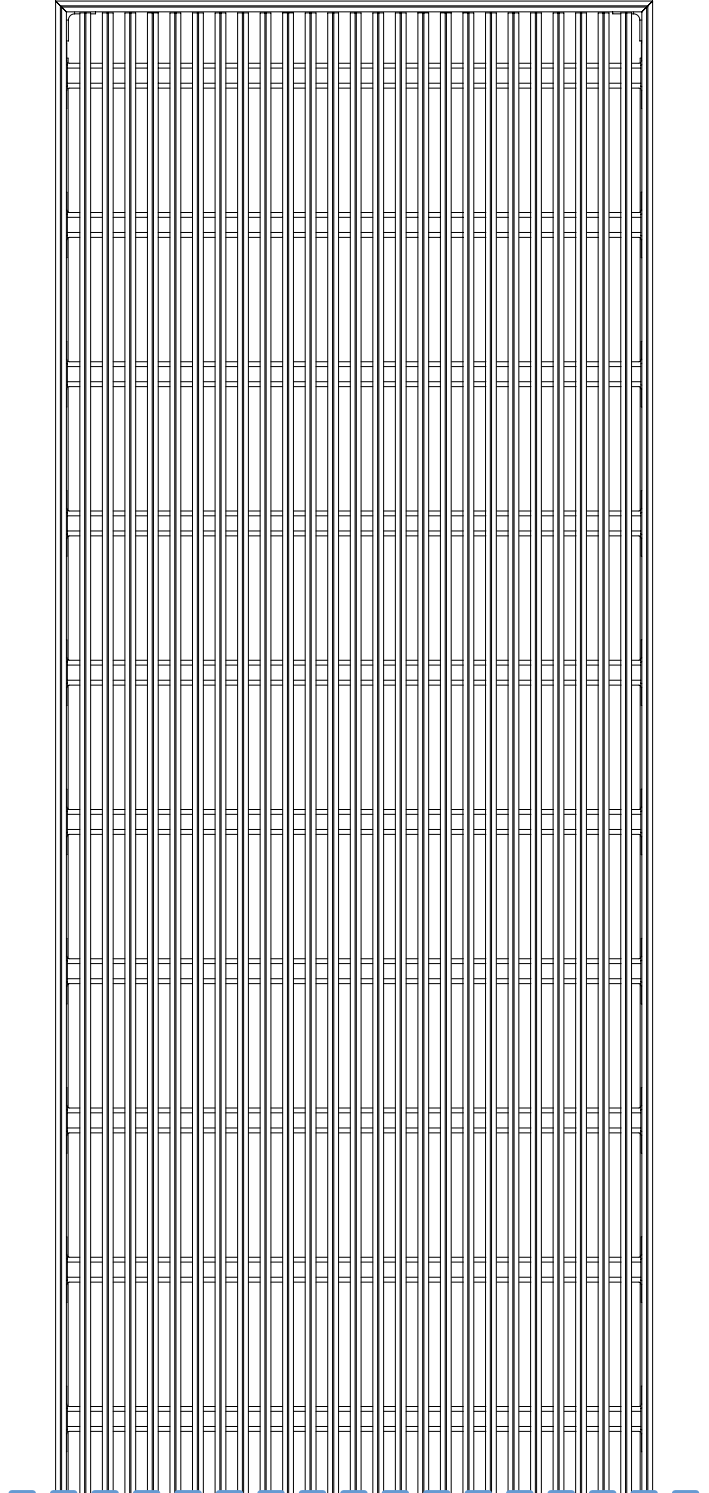

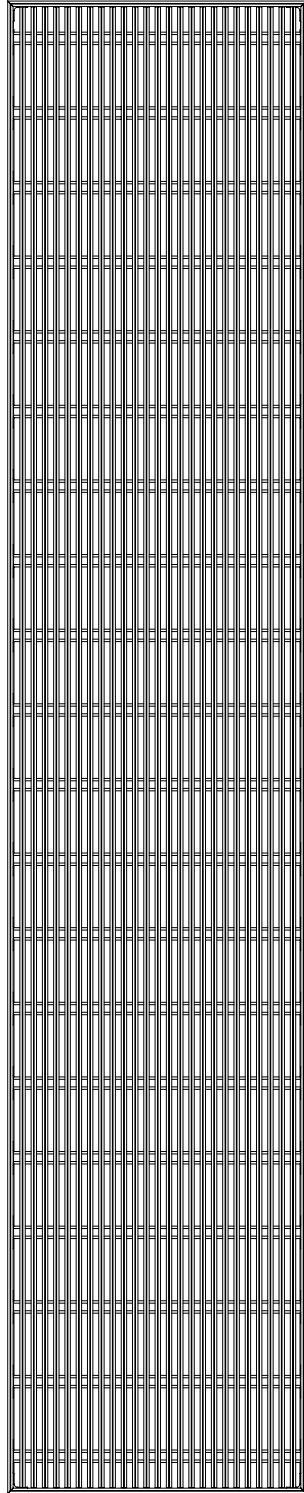

Grille Rating:	304 / 316 Series Stainless Steel (Specify on Order) Conforms to NFPA 90a Specify Required Load Rating on Order
Grille Configuration:	Framed (SS-LG-F) Frameless (SS-LG-L) Precision Roll-Formed Linear Bars Minimum Bar Width: 0.2" (5.5mm) Nominal
Grille Dimensions:	Custom Available (Specify on Order)
